TaxStack Solutions

PROJECT SUBMISSION DETAILS

SELECTED HACKATHON TRACK

Theme 2: Experienced Developers — Modernize What Matters

PROJECT DESCRIPTION

TaxStack Solutions is an interactive decision engine built to solve the "Retirement Tax Cliff." This application was 100% developed using IBM Bob.

Millions face mandatory IRA withdrawals triggering punitive tax brackets and Medicare surcharges. Legacy spreadsheets fail here. Using IBM Bob, we engineered a custom calculation engine resolving SECURE 2.0 rules and Social Security tax circular dependencies. Our "RMD Taming" strategy paces annual conversions to flatten the withdrawal curve—saving $532,888 in peak annual RMDs for a $3.5M portfolio.

TECH STACK USED

AI Engine Generation
IBM Bob (100% code generated via prompting)

Frontend Framework
React 18

Build Tool & Bundler
Vite

Styling & UI Components
Tailwind CSS, Lucide React

Data Visualization
Recharts

Language & Runtime
JavaScript (Vanilla JS engine)

Version Control
Git, GitHub

Hosting & Deployment
Vercel
