TaxStack Solutions

Project Submission Details

SELECTED HACKATHON TRACK

> **Theme 2: Experienced Developers — Modernize What Matters**

PROJECT DESCRIPTION

TaxStack Solutions is an interactive retirement tax planning engine that modernizes legacy financial spreadsheets. It algorithmically models multi-year Roth conversions against dynamic federal tax brackets, Medicare IRMAA surcharges, and Social Security taxation. Featuring inflation-adjusted thresholds and targeted "RMD Taming" strategies, the application helps retirees identify the optimal conversion schedule to minimize lifetime tax liabilities, preserve wealth, and avoid catastrophic benefit surcharges under SECURE 2.0 rules.

TECH STACK

- **Frontend Framework:** React 18, Vite
- **Styling & UI:** Tailwind CSS, Lucide Icons
- **Data Visualization:** Recharts
- **AI & Modernization Assistant:** IBM Bob
- **Languages & Runtime:** JavaScript (ES6+), HTML5, CSS3, Node.js
