THEME 2: MODERNIZE WHAT MATTERS

TaxStack Solutions

Algorithmic retirement tax planning and estate wealth preservation.

TEAM & PROJECT INTRODUCTION

Replacing Brittle Spreadsheets

An interactive, algorithmic decision engine modeling multi-decade tax liabilities.

- React 18 & Vite
- Custom JS Engine
- Tailwind CSS
- IBM watsonx.ai

PROJECT SUMMARY

The Legacy Problem: The Tax Cliff

Missing Inflation

Ignores multi-decade threshold expansion.

Lookback Flaws

Overlooks strict 2-year Medicare MAGI window.

Blunt Logic

Forces unnecessary 35% peak tax brackets.

PROJECT SUMMARY

Dynamic Lifetime Tax Modeling

Dynamic Indexing

30-year bracket inflation tracking modeled at 3.0%.

SECURE 2.0 Native

Linked directly to IRS Uniform Lifetime Table divisors.

CMS IRMAA Engine

Rolling 2-year MAGI surcharge forecasting.

PROJECT SUMMARY

Strategic Breakthrough: RMD Taming

Capping conversions at the 24% bracket prevents tax creep without voluntarily overpaying today.

ANNUAL TAXABLE RMD SAVED

$532,888

CONVERSION STRATEGY

$250k/yr for 22 years

KEY LEARNINGS & IMPROVEMENTS

Algorithmic Insights

1. Resolving Circular Logic

Social Security taxation loops algorithmically fixed.

2. State Tax Complexity

New York State's $20,000 pension exclusion mapped precisely.

3. Room for Improvement

Monte Carlo stress-testing required to model market volatility.

FUTURE ROADMAP

Next Steps for Development

1

Autonomous AI

watsonx.ai client strategy memos.

2

Real-Time API

Live brokerage ingestion via Plaid.

3

Estate Modeling

SECURE 2.0 multi-generational rules.

TaxStack Solutions

Transforming regulatory burdens into financial clarity.
